How the Moon appears when the is Eclipsed, and in this manner will she appear in the year 1661, upon Saturday being the 28, of September.

THE BOOK

of Knowledge.

Both necessary and usefull for the benefit of all People.

Sunday. If the Pativity of our Lord come on Sunday, Winter thail be good, the Spring windy, Iwat and hot, Wintage deurithing : Dren and Shep multiplpen, Bonep and Bilk plentiful : peace and accord in the land; pea all the Sundates in the year profitable. Thep that be boan hall be frong, great and Wining: and be that fireth than be found.

Monday.

F it fan on the Honday, Winter than be indifferent, Summer 029,03 clean contrary; to that if it be rainy and tempetuous, Wintage had be doubtful in each Ponday of the laid peece, to enterpyife and thing, it had be prosperous and frong. Who that flyeth than some be found: theft done that be proved, and he that falleth into his bed that some recover.

Tuesday.

If it come on Auctoay Winter thall be good, the Spring windy, Summer truitful Wintage laboursome, women ope and Ships perity on the Sea. In each Auctoay of the same year, to begin a work it will prosper: be that is born shall be strong and covetous, dreams pertaine to age. He that sight wall soon be sound: theft wone shall be probed.

Wednelday,

If it come on the Mednelvay, winter thail be Sharpe and hard, the Spring windy and evil, Summer good, Aintage plentiful, good wit easily found, young men dye, honey sparing, men desire to travell, and Shipmen saile with great hazard that year. In each Mednelvay to begin a work is good.

Thursday.

I f it come on the Thurlday Winter thail be good, the Spring windy, Summer fruit-

full, Wintage plentifull, Kings and Princes in hazard. And in each Chursday to begin a new work prosperous: He that is born thall be offair speech, and worthspfull; he that figeth shall soone be sound: thest done by women shall soon be probed. He that salleth in his bed shall soon recover.

Friday.

If it come on the Ariday, Whinter, thall be marbellous, the Spring windy and good, Summer vey, Aintage plentious: There thall be trouble of the ayre, Sheep and Bées perith, Dates bear. In each Friday to begin a work it thail prosper, he that is born thall be profitable and lecherous. De that fixeth thall soon be found, thest done by a child thall be probed.

Saturday.

be barke, snow great, fruit plentions, the Spring windy, Summer evill, Aintage sparing in many places: Dates thall be dear, Hen war ack and Bees doe. In no Saturday to begin a work thalbe good, ercept the course of the Poone alter it: Chest done thall be sound, he that flyeth thall turn again to his owne:

The Book of Knowledge.'
own: These that are fick, hal long wast, and
uneath they had escape death.

2. Of the Birth of Children in the Dayes of the Week.

At the Sunday who that is born, hall be great and chining. Who that is born on the Ponday chall prosper, if he begin a work on that day. Who that is born on the Tuest day, chal be covetous, and perich with Iron, and hardly come to the last age; and to begin all things is gwd. He that is born on the Wednesday, chal lightly learn words. He that is born on the Thursday, chall be stable and worthipful, and to begin all things is good. He that is born on the Friday; chall be of long life, and Lecherous, and to begin all things

ts good. De that is boan on the Saturday, hall seldome be profitable, but if the course of the Poon bring

it thereto.

3. The

The Book of Knowledge.

3. The nature and disposition of the Moon in the birth of Children.

The first day Adam created.

I was made: to be all things is profitable, and that thou frest in expect the sleep shall be well, and turn into foy; if then sæmest to be obercome, neverthelesse thou shall overcome. A Child that is been shall some encrease, and be of long life, and rich, he that falleth sick shall long wail, and suffer a long sickness. It is good to let a little blood.

The second day Eve made.

made: to do an errand is god, to enterpaize any thing is profitable: es to buy e fell,
and the into a thip to make away, and to fow
fieds: theft done thall foon be found. Whatfoeder than thalt for flied, sudden effect it
thall have, whether it be good or evill; to let
blud is good. A Chilo that is born, soon thall
was

war, and he that he alecherer; and if a woman probe a Erampet.

The third day Cain was born.

Is the third day of the Moon Cain was been; abstain from deing of any thing, except thou would not have it prosper; draw up roots in the pard in the siels: thest done shall soon be sound. Whatsoeder thou seek in siep is nought: the man childe shall grow so, the time, but dre young. A sick man that saketh in his ded shall tradell, and not escape: Wo let blood is good.

The fourth day Abel was born.

The the fourth day of the Moon Abel was borne. That soeber thou does is good in each tradel: the dream thou seek, bath effect: hope in God, and counsell good. A child that is born, wil be a good creature and much praised. A man that salleth ack either soone that be healed, or soon wall dre. It is good to let blood.

The fifth day no Sacrament.

Is the fifth pap of the spaon, do nothing of err and, not work; to receive the Sacrament is vangerous; De that flyeth thall be taken or killed; the veam that thou thalt fix thall be well. Beware that thou reject no countel. A chito that is born thall ope pourig:

The 18 day, good to enterprize any thing. A No in the eightenth day of the Poon it is good for all things to be done, namely, to begin houses, and to set children to school: dreams are good, thalbe done within twenty days. Who that sicknesse hath, shal soon rise, or long be sick, and then recover: thest done shal be found. A man-child now born shal be baliant and eloquent, prond, unpraceable, and not long of life. A maso child then born, shal be chaste, laborious, serviceable, and better in her latter age: they shal both be marked above the kness. Pot to hardy be thou to let blood this day.

The 19. day, a day indifferent.

The the nineteenth day of the Poon, it is instifferent to begin any thing, dreams that come within twenty dayes: who that hath licknesse, Wal foon rife, if he take medicine: theft then done that not be found. A manchild then born, that he true, begin, fight, wife

wife, ever war better and better in great worthip, and have a mark in the brow. A main-chilo then born, that be right lick; yet wednes to one man; that day is good to bled

The 20. day Isaac blessed his son.

A Poin the xx. day of the Woon, Isaac blessed bis son; what sover thou wilt do is good. A dream of thou self, that appear, but te'l it to no man. No make wedding is good, to buy a servant; to build houses; to change solds of Sheep from place to place; to tame beaks, and to sow seds is good. A child that is born that be a senter, and he shall have many arriving: that is lost that be sonnd; to change Bees is good. A sick man shallong wall, or soon arise: to let blood at even is good.

The 21. day, Saul was born.

If the xxi, vap of p Poon Saul was born, first king of the Jews. Aveam is true a come to passe within four vares. A child that is born wil find much evil, he wal be a thick, and witty, or a traitor and travellous. Elau took the last victing of his Father; it is good to heal S wine and other Beasts; it behoveth to absain from gaming: to go in p way is good, a sick man wal arise; thest wal

The the xxii. day of the Poon Joseph was born: it is a day of holineste; it thou does any errand, thou thalt find it grievous: dreams that be certaine, and that come to for. A child born, in all days that be a Purchaser, merry, fair and religious. A sick man both late is consirmed thealed. Best to change from place to place, is good: and to let blood all day is good.

The 23. day, Benjamin was born.

Is the 23.0ap of the Poon, Benjamin was born, Son of the right live, the Cak of the Patriack Jacob. Whatever thou wilt vois good: a dream that thou leek, Wal turn to joy and nothing that trouble thee, and other while it was wont to fal within eight vapes, To take awife is good, to make wedding, to lay foundations, to open new earth, and to tame beaks is good. A child born that be an out-cake many adventures be that have, and in fins be thall vie, a fick man that artife: it is good to let blood.

The 25 day, the Plagues of Egypt.

Is the xxv. day of the Won, our Lord sent signes into Egypt by Moses, & in each day he passed the red Sea; We that taketh the Sacrament that dope a perillous death, sear is threatned. The dream signifieth hard things, and with in ten dayes it was wont to come early, then bow thy head into the Cast; a child born that be an evil man, many perils he thall suffer; a sick man that sustain insury, and unneath escape, it is good to let blood.

The 26 day Moses dryed the red Sea.

1 P the xxvi vay of the Poon, Moses vayed the red Sea: In that vay Jonathan the son of Saul was born, and Saul view with his sone. Thou walt begin nothing: the veam that be certaine, and turned into soy. Pilarims must be ware of Spyes, & Chemies. A child born that be full lovely, but neither rich nor poor. A sick man that travel and arise, if he have the vropse, he thall ove: to

16 The Book of Knowledge. ist blood a little is needfull.

The 27. day, Manna sent.

I the xxii. day of the Moon, our Lord rained Manna to the children of Israel; what ever thou wilt do is good, use distingence; a dream of thou sett that come either to good or evil. A child born that be of long life, and most loved, e if a man, neither rich nor poor: a sick man thall rise to life, he that be holden in much languor, but that he healed, folds of the p fro place to place to change is good. To let blood in the evening is god.

The 28. day, good to pitch Tents.

Is the xxviii. vay of the Moon, War may begin, and Tabernacles fixed in p velert; whatever thou wilt do is good; a dream that thou feek hal turn into joy. A chito born halbe much loved, he halbe holden in fickness a fick man p faketh in intermity, foon hal be faved, to let blook in the even, is god.

The 29 day, the Jews go into Canaan.

Ih the xxix, day of the Moon, the Jews went into the Land of Canaan, Herod the King cut off the childrens heads. Besgin nothing: the dream that be certain and good, gladness and joy it fignifieth, an ere rand begun is good to fulfill, to take wife

h

a

is good, but yet make no dowers, not write Testaments. A chive borne shall be of long Life, wife, holy, and mak. To sish and hunt is good, a sick man shall not be grievously sick, but escape, It is good to be let blood.

The 30. day, Samuel was born.

A Po in xxx, vay of the Poon, Samuel the Prophet was born, whatfor ver thou wilt vo, is good. A dream that appeareth to the certain, within two bayes thou walt fee, and thou walt finds a red figne in the Cast within nine vayes. A child born wal be of long life, and prostable and well measured in each thing. A sick man shall night come to death: in no manner let blod. These and many other pertain to men, as the course of the Pon followeth.

Aturn, and his disposition.

Saturn, and his disposition.

Saturn is the first Planet, and the wicks evert, and he beginneth the Zodiack but once in thirty years, reigneth in each Signe two years and a halfe. which is insir Signes, sitteen years. And in all the twelve Signes thirty yeares: And aright as there are twelve Signes in the Zodiack,

Zoolack, so are there twelve moneths in the year, each fign to his moneth. Where fore between before and look where Saturd reigneth in three winter figns, that is to say, Capricoru, Aquary, and Pisces, and all those seen years and half, that be scarceness and bearth of Corn, Fruit, Beats and all other things: sor in three years signs be hath might and most power to fulfill his malice, if he be not letted by neighbour hood of any good Planet.

5. What the Thunder fignifieth every Moneth of the Yeer.

Thunder in January fignisheth the same yeer great winds, plentifull of Corn and Cattel peraddenture. Thunder in February, signisheth that same yeer many rich men shal dope in great sicknesse. Thunder in March, signisheth that same yeer great winds, plenty of Corn, and debate amongst people. Thunder in April signisheth that same yeer to be fruitfull and merry, with the death of wicked men. Thunder in May, signisheth that yeer need, scarcenesse and dearth of Corn, and great hunger. Thunder in Junc, signisheth that same yeer that woods shall

hal be overthrown with winds, and great raging that be of Lions and Wolbes, and folike of other harmful Beafts. Thunder in July, fignifieth that fame per than be god Coan, and loffe of Beafts, that is to fag, their Arength Wall perilb. Thunder in Auguft, fignifieth the same per sorrow, walling of manp, for many that be fick. Thunder in September, fignifieth the same per great wind, plentiful of Toan, a much falling out bet wen man and man. Thunder in Octob. er lignifieth the fame per great wind, and scantnelle of Coan, Fruits and Ares. Thunder in November, signifieth that fame per to be fruitfall and merry, theapneffe of Coan. Thunder in December, fignifieth that same per cheapnesse of Coan, and Wheat, with peace and accord among the people.

9. Of the good dayes for bleeding, and ill dayes for any work.

I Pevery moneth be two evil papes, one in waring of the Poon and another in the waning. The Balender Cheweth them and their hours openly enough: in the which dayes, if any folk take licknesse, or begin any

any new thing, it is great grace if ever it fate well. 02 come to good end. Anothere are Afty Canicular, 02 Dog. Dapes, that is to fay, from the fifteenth Balenber of August, to the Pones of September, in which dages it is forbioden by Aftronomy to all manner of folks to let bloo, or take Phytick : pea, it is and to abffain from Momen: For why, all that time refancth a Starre, that is called Canicula Canis in Latin, a Bound in Che alfth : now of the forefair Star Canicula, the foresaid fifty dapes are called Canicular papes, and biting as a Bitch for the kind of the far Caniculas is bopling and beenning as fire, and biting as a Bitch whelp: that time the beat of the Sun, and of the Star, is to fervent and violent, that mens bootes at mionight (west as at mio-pap and fiveleth liabtly, bloweth & brenneth: and if they then be burt, they be more fick then at any other time, berp nere bead. In thefe bapes an benemous Serpents crep fly, and gender, and so they over let hugely the apr, in fæbing of their kind, fo that many men are bead thereby. In these dapes a fire is good night and dap, and wholefom: feth pour meats and take hed of feding biolently.

28

And from the eighteenth katender of October, to the seventeenth kalend of November, look thou take no colo: for then the powers of man, of earth, to fall things eise settle. And they may not open again til the seventeenth kalend of April: where sore it is less harme for thee to take colo at Christmasse then at this time.

7 To know how a man shall keep himself in health.

I f thou wilt keep the long in health, fig anger, wath, and enby, and give thee to mirth inmeafare: travel faolp. fo that thou Imeat not to much in the Summer, and namelp, the Canicular dapes : flp all manner of Arona Difinks and hot Spices, beenning Weats, especially their ercelle. Halt not too long at moan. Sup not too late at night; eat not to ballip, not overmuch at once, and that that thou eatest chew it wel: every time & thou eateff, reft a little after; fleep not after ofmer except in May, June, July, and August. And pet the leffe that thou deepest then, the better it is. To fleep well in the waring of the Bight, and to be early up in the Pozning, is the better : and everp

enery day bewate of Apples, that none enter into thee falting: for thereof commetbareat peffiences and beat. And in great colo and peftilences, eat much Barlike ebery day with nine Saffron Chieves, and it will do thee much good, Cat enough in Winter, and the Spring, but little in Summer:look the meat me well fe afoned : in Parbelt bes mare of fruits, for they are not good, er - cept thep be aiven the for medicine; of all mans ner of meats fooden is the belt, ear not too many hot Spices, nozeat but at once: Foz better it were to eat seven times in the day; than once the fil : fleth is more nourilling than fith : eat not too much fower meats, nor falt; for they will make thy bones fore; look the orink be not too new, nor too olo: fweet powozed meats be most woolsome. Of all things take measure and no moze: for in measure refts pertue.

8 The perilous dayes of every moneth.

The change of every Moon be two dayes, in the which what thing soever is begun, late, ovever, it that come to good end, and the days be full perillous for many things.

In January when the Moon is three or four dances old.

3n February, 5, 02 7.

In March, 6, 02, 7.

3n April, 5,028.

In May,8, 02 9.

3n June, 5, 02 15.

In July, 3, 02 13.

0

2

0

g

0

g

11

3n August, 8, 02 13.

In September, 8, 02 13.

In October 5,02 12,

In November, 5, 02 9. In December, 3, 02 13.

Aftronomers say that the vapes in the peer are perillous of veath: and therefore they forbio men to be let blood on them, or take any drink. That is to say,

The third day of the Ponth of January.

The first day of the Poneth of July*
The second day of the Poneth of Octo.

The last of the Poneth of April.

The firtt day of August.

The last day going out of December.

These six vayes with great viligence ought so to be kept, but namely the latter three, sor all the veins are then sull. For then whether man or beast be knit in them, within

within seven bayes, or certainly within sourteen bayes he shall vie. And if they take any drinks within 15. bayes, they wall die; and if they eat any Goose in these three bays, within sorty bayes they wall bye, And if any child be born in these three latter bayes, they shall die a wicked beath.

Astonomers and Astrologers say, that in the beginning of March the seventh night, 02 the sourteenth day, let the blood of the right arm: and in the beginning of April, the elebenth day of the lest arm: and in the end of May, third 02 sifth day, on whether arm, thou wilt, and thus of all that peer, thou that occurry be kept from the Fever the falling Gout, the sitter Gout, and lose of thy Sight.

9 Ptolomies rule for the Zodiack.

E Ach mans body is ruled by a certain

L'digne of the Zootack.

Wherefore as faith Ptolomeus, If then be lick in any limbe, so not medicine unto that limbe, for it Wall rather hinder then further. And namely, Ap blood letting at that time. Thus Walt thou know how the Signes reign in our limbs.

re The

th

10. Of the twelve Signes.

Ries, or the Ram governeth the Head.
The Bull reigneth in the neck, and in the Throat.
Gemini, or the Twins rule the Shoulders, arms and Hands, and these three are the signs of poping.

. Cancer, or the Crab, commandeth the Stormack, Limbs, Arteries, Pilt, Liber & Ball.

The Lion reigneth in the Back, Stoes,

Bones, Sinelus and Briffles,

Virgo.02 the Maid guiveth the Mombe, Pioriffe and Buts. And also the reigneth other while in the Stomack, Liver, Ball, and Wilt, and other nutriffe Limbs beneath the Pioriffe, And these three are the Signes of

Libra or the Ballance, holoeth in p Pavel, the reins, a the lower parts of the Mombe.

The Scorpion keepeth the Bladder, the Buttocks, and other Privittes of Pan or Moman.

The Sagittary dwelleth in the Thighs and Buttocks: these thee are signs of Parbett The Capricorn refuncth in the Lines.

The Aquary go berneth the Legs Anchies
The Fish ve teaeth the feet: and these three
be the Signes of Winter.

The disposition of the Planets.

SAura, Jupiter, Mars, Sol, Venus, Mercury, Luna.

Saturnius is the cause of death, dearth and

peace.

Jupiter is the cause of long peace, rest and

bertuous libina.

Mars is the cause of princile, beinte, twar. Sol is the cause of life, health and waring. Venus is the cause of lusty love elechery. Mercuric is the cause of much spen sperchandise and slights.

Luna is the cause of moitmette, are at was

ſ

ters and biolent floors.

Saturns hour is good and firong to do all things that afketh firength only, to nought elfe, lave to battle; for it is wondrous evil. That man or woman that hath & Star Saturn to his Planet, he is melancholy, black, e goeth swiftly; he hath a void heart, with a both ter as worm wood, he will lightly be mooth.

worth, he is quarrellome, witty, covetous and treful: he eateth halfily, and is fall and inclining to lye, with thining eyes as a Cat; he hath in the forehead a mark or wound of fire, he is por, and his cloathes are rent unto a time. And thus he hath open figns, and all his covetous is by other mens possessions, and not by his own,

Jupiters hour is god in all things, namely peace, love, accold, Who that hath this Starto his Planet, he is languine, ruvoy, and goeth a large pace, neither tw livit no; tw loft: his Cature is læmly and Chining, he hath a lair vilage, lovely lemblance, red lips, fair hairs, broad face, good brows; his cloths are now a Arong, he is livet, peaceable, and loft.

Mars hour is evil and better by night than by day. For it is Pasculine on the night, and Feminine on the day: It is good to do any thing, but with great Arength: by night it is good to enter battel e also by day, but not so much good as by night. Who that hath this Starre to his Planet, his making is of good defence, e aftentimes his face is red with blod: his face is small and subtill, and laughing, and he hath eyes as a Cat: and all y dayes of his life, he will accuse many men

of epil: he bath a wound of a Swood in his face, he is most cholerick. And thus he bath

oven Aans.

Sols hour is the work of all other hours, no man in this hour may bo his wil, lave kings Lords, & that with areat Arenath. Who to in this hour entreth Battle be Wal be Bead there. Who that hath this far to his Planet, be bath warp eyes, great freech, and wicked thoughts in his heart, he is wicked a abaritious, neither white noz black, but betwirt both:he hath a mark in his face, oz a Wound and bath a wound in his bopp of fire, and he is right wicked and grudging in his deds.

Venus hour is god in all things, and it is better on night, then on pay, ever til mio-bay at mio-day it is not goo, for o Sun coveretb tt. Dn Sunday & ninth hour is Venus hour; fue not then to any Lozo noz Botentate; foz if thou bo, thou thalt find him worth. Who that bath this far to his planet, namely, if he be boan by night in Venus bour he is white. bath a round face, little forhead, round beard, de bath mitoole nofe, and hairy spes: be is lauching and litigious, & he hath a mark in His face: his making is fare and plain, and oft time bis nether lip is greater then the up.

one

And therefore he is called the little world.
or else he is called all creatures, for he both take part of all.

and of the four Complexions, with the four Seafons of the Year, and the twelve figns for each Moneth.

1

Jeach man and woman reigneth the Planets, and every Sign of the Zodiack, and every prim Quality, severy Clement, and every complexion: but not in every one like, for for in some men reigneth one more, sin some reigneth another: and therefore men be o bivers manners, as wall be made apparent.

14. Of the four prime Qualities.

Four prime Qualities there be; that is to fap, Colonels, Beat, Dzinels & Moiffure, which be contraries: a therefore they may: not come nigh together without a mean; foz the hotness on pone live bindeth them togsther, and colonels on the other five. Also hotnelle and colonelle are two contraries, and therefore they may not come nigh together without a mean, for the mothnels on the one five bindeth them together, & dainels on the other. Politnels is cause of every thick sub-Cance, cof every fwet talt: And there again, definels is cause of every thin subffance, & of every lower Ainking talle: & allo botnels is cause of every red colour, and large quantity. there again colonels is cause of every white colour, and little quantity, Thefe four pime Qualities in their combination make o four Clements. Apre, moist and hot, the Fire bot and bay, the Carth bay and colo, the Water cold and moiff. The Apre & Carth are two contraries, and therefore they may not come nigh together; but as fire binds them on the one

Li

Iff

ſ

one live, and the water on p other five. Also Fire and water are two contraries, & there. fore they may not comenigh together; but as paiz between them binds on the one fiee, & the earth on the other five. The fire is tharp fubtil and moveable: The Aprets fubtil, mo. Dable, coppulent, & bul : The Carth is coppulent & thick : The water is mobeable, co2pulent and bull: The Carth is coppulent, bull & unmobeable. In the heart of the earth is the Center of the Woold, that is to fap, the mioft point : & in every Center is Bell. And there again about the Fire are the Cars, & about them in Beaben Chapftaline; that is to lap, Waters of all bliffe, departed in nine orders of Angels, then is Deaben in the bigbett rooms, and largeft. And there again is Wel in b lowelf, narrowell and traightell place.

Right as there be four Clements, so there be four Complexions, according in all manner of qualities to these four Clements.

The first is Sanguine; that is to say blood genozed in the Liver, Limbs, and like to the Apre,

The fecond is Cholor, gendeed in the Gal, and like thereto, e it is according to the fire-

The third is Pelancholy, gendred in the Pilt, and like to the dregs of blood, and it accordeth to the earth. The

The fourth is flegm, gendzed in glungs: like to Ball, and it accordeth to the Water.

A Sanguine man much may, and much

coveteth, foz be is mot bot.

Co

es

IS

p

10

b

1:

ŧ

et

e

A Cholerick man much coveteth, and

little may, for he is hot and day.

A Pelanchelious man little may, and uttle coveteth, for he is dry and colo.

A Flegmatick man little cobeteth,and

little may, for he is colo and moit.

A Sanguine man is large, lovely, glad of cheer, laughing, and ruddy of colour, feolast, sleshy, right hardy, mannerly, gentle, and well nourished.

A Cholerick man is guileful, fafe and, wathful, traiterous, and right bardy

fmail; pap and black of colour.

A Pelancholious man is envious, fozery, courtous hard, falle, guileful, dreade

ful , flothful, and cleer of colour.

A Flegmatick man is Cumbzy, fleepy, flow, fleightful, rhumatick, bull and hard of wit, fat vilage, and white of colour.

15 The yeer divided with the knowledge of the state of mans body by Urine.

Is the per be four quarters, ruled by these four Complexions; that is to say, the spring

Spring, Summer, Parvett and Winter; Spring hath three moneths, that is to say, March, April, May, and it is Sanguine complexion. Summer hath also three moneths, that is to say, June, July, and August, and this quarter is Cholerick complexion. Parvett hath also three moneths, that is to say, September, October, & November, and this quarter is melancholious complexion. Winter hath also three moneths, that is to say, December, January, and February, and this quarter is slegmatick complexion.

Cach day also these four complexions reigneth, that is to say, from three after mio-night, nine reigneth Danguine, and from nine after mio-night, to three after mio-day, reigneth cholerick, and from three after mio-day, reigneth melancholy, and from nine after mio-day to three after mio-night reigneth flegm.

Also in the sour quarters of the World, reigneth these sour Complexions: that is to say, Sanguine in the Cast, Cholerick in the South, Pelancholy in the West, and

Flegme in the Porth.

Also the four Complexions reign in the sour ages of Pan: that is to say Choler in childhod, Sanguine in manhood, I legme in

633

is from the Beart, the third is of the Liver and the fourth is from the Pilt, other wife called the low Liver-brin.

The bein of the bead taken in the arm ought to bleed for to take away the great repletion and abundance of blood may annoy the head, the eyes, and the brain, and availeth greatly for changeable heats, and swelling faces, and red, and for divers other sicknesses that may fall and come by great abundance of bloo.

The vein of the Pilt, other wife called the low vein, would bleed against Feaver Mertians and Quartains, and it ought to be made a wide, and a less very wound than in any other vein, for fear of winde that it may gather; and for a more inconveniencie, for fear of a line w that is under it, that is called the Legard.

In each hand be three beins, whereof that above p thumbought to bleed, to take away the great heat of the vilage, and for much thick blood and humours that be in the head, and this bein delayeth more then that

of the arme.

Between the little finger and the leech finger is letting of bloo, that greatly abaileth against all Feavers, tertians and quartians

KIIB

and against the flames and ofvers other lettings, that come to the paps and milt.

In the thigh is a vein, of the which bleve inga vaileth against pain of the Benitals, log to put out of man's body bumours that

are in the groins.

The vein that is under the ancie of the fot without, is named Sciot, of the which bleding is much wroth against the pain of the slanks, and for to make a void and issue others humours which would gather in the sate place; and it availeth greatly to women to restain their mensionality, when they have to great abundance.

24. Of the Yeer with the growth of things.

Which are named thus, Ver, Hyems, Estas & Autumnus These are the four seasons in the year. Prime time is & Spring of the year conteining February, March and April. In these three moneths every green thing growing beginneth to but a flourish.

Then cometh Summer, as May, June and July, if in these the moneths every heart, grain and tree is in his most strength and

beauty,

b 15 b

heanty, and then the Sun is at the highest. Pert cometh Autumn, as August, September and October, wherein an fruits war

ripe, and are gatherd and houseb.

Their cometh November, December, and January, and those thee monethe be in the Winter : that time the Sun is at the lowest. and is of little profit. We Aftronomers fap. that the age of man is this core and twelve pears, and that we liken but one whole pear: for evermore we take fir pears for every mo. neth, as January of February, and fo forth: for as the pear changeth by the tivelbe months into twelve ofvers manners, to both man change bimfelf twelve times in bis life, by twelve ages, tevery fix times fix maketh thirty fir and then man is at the bett, alfo at the bigheft: a twelve times fir maketh thies fcoze and twelbe, and that is the age of man. Thus pon map count and reckon for every moneth fir pea og elfe it map be ander foo by the four quarters and lealons of pear:lo man is divided into four parts, as to pouth, frength, wilcom, gage. De is to be eighten years young, eighten years frong, eighten years in wilcom, & the fourth eighten pears to go to the full age of threefcore and tivelbe.

25. The change of Man twelve times according to the Moneths.

He must take the first six peers for January, the which is of no vertue nor strength, in the season nothing on the earth groweth. So man after that he is born, till be be six pears of age, is of little or no wit, strength or curning, and may no little or nothing that cometh to any profit.

Then cometh February, and then the dayes lengthen, and the Sun is more hotter: then the fields begin to war green. So the other fir years till he come to twelve, the child beginneth to grow bigger, and is apt to learn

fuch things as is taught him.

Then comety the moneth of March, in which the Labourer loweth the earth, and planteth trees, and edificeth houses. The chilo in these six pears wareth big, to learn boatine and science, and to be fair and pleasant, and loving; for then he is eighteen years of age.

Then cometh April, that the earth and the trees are covered with green flowers: and in every party good encrease abundantly.

Then cometh the young man to gather the fweet flowers of hardinesse; but then beware betat the cold winds a stooms of vices beat not

not p thou twei

for then free ly pa of ac

the to no his gold man imoz tage the f

TR

funt Sun Soo begit tog t

in or then find not pown the flowers of good manners, that honly bying a man to bonour, for then be is

twenty four pears of ace.

Then commeth May, that is both faire and pleafant; for then Birds fing in Woos and Forretts night and dap, the Sun Wineth hot: then man is most lufty, mighty, and of proper frenath and feeketh playes, sport, and manly pastimes, for then be is full thirty years

of age.

Then cometh June, and then the Sun at the highest in his op erioional; he may ascend no higher in his Station. His gleamering golpen beames ripeneth the Coan : and then man is thirty fix years, he may ascend no moze, for then nature bath given them cous tage and firength at the full, and replact the feeds of perfect understanding.

Then cometh July, that fruits befet on funning, our Com a baroning but then the Sun beginneth a little to besceno bown ward So the man goeth from pouth toward age, & beginneth for to acquaint bim with fabricle, log then be is come to forty two years of age.

After that cometh August, then we gather in our Coan, also the fruits of the earth, and then man both his officence to gather for to and himself, to maintain his wife, chiloren and houseould when age cometh on him, and then after that fir years be is folty feven

pears of age.

Then cometh Septemper, that Whines be made, & the fruits of the trees be gathered; and there with all he noth fresh y begin to garants his house, and make provision of needed things, for to live with in winter, which draweth very neer: then man is in his most several and covernous estate, prosperous in wiscome, purposing to gather and keep as much as shall be sufficient for him in his age, when he may gather no more; and then he is

lit

I

PO

lfb

th

fifty four years age.

Then cometh October, when all is gathers to, both Corn & other manner of fruits, also the Labourers Plow, and sow new seeds of the Earth so, the year to come. And then he that nought soweth, nought gathereth: and then in these are yers a man that take himself unto God, so, to be penance and good works, and then the benefits p year after his death, he may gather and have spiritual prosit: and then man is subject un of three score years. Then someth November that the dayes be bery thous, a the Sun in a manner giveth but little heat, and the trees lose their leaves, the siets that were green look hoar a gray; then all

all manner of hearbs are his in the ground, then appeareth no flower, twinter is come, that the man hath uncerstanding of age, and bath lost his kindly heat and strength: his teeth begin to rot and fail him, then hath he little hope of long life, but describe to come to the life everlasting: and these six years maketh him the escape and six years of age.

Latt of all cometh December, full of colo, with frost and fnow, with great winds, and formy weather, that a man cannot labour, p Sun is then at the lowest: the trees and the earth are bio in Inow, then it is good to bold them nigh the fire, and to fpend the goos that they got in the fummer. For then men begin to war croked and feble, coughing and foit. ting, and loathform, and then he lofeth his perfed unverftanding, & his beirs veftre veath: thefe fix years maketh bim ful thaefcoze and twelve pears, and if be live any longer, it is by his goo guitoing and steting in bis pout howbest it is politile that a man map live till he be a hundred pærs of age; but there be few that libe fo long.

28. Of the Circle of the Sphear.

Some of the Circles of the Sphear be parallels, some be oblique, some others go crose over the Poles. The parallels are they that bath the same Poles as the world hath; and the be the parallel circles. The Arctick the Chival Tropick; the Equinocial. The Arctick circle is even the greatest of all those circles that we have continually in light, and be scarcely toucheth the Porizon in y point, and is altogether presented above the earth.

And all the Stars that are included in this sircle neither rise not set, but a man shal especthem all the night long keep their course round about the Pole. And that circle of our Babitation is drawn of plurther sout of Ursampior. The Estimal circle, most northmard of all the Circles that be made of the Sun, whom when the Sun removeth into, he turneth back from his Dummer circuit, then is the longest day of all the per and p shortest night; and after the Dummer return, the

74 The Book of Knowledge.

Sun thall not be perceibed to progrede any farther toward & Porth, but rather to recoil to the contrary parts of the weald: wherefore in Oreek this circle is called Tropocus, the Canfuocial circle isthe moft greateft of all the the parallel circles, & is to parted by the Bozison, that the one balf cirle is above the Garth, the other half circle lyeth under the Boxison. The Sun being in his circle cauleth tipo Equinocialsithe one in the Spring, and the other in the Parbeit. The Brunal Trovick is a circle molt South of all the circles. that by the moving of p world, be described of the Sun, which when & Sun is once entred into he returneth back from his Winter progrels, then is the longest night & the hortef bap in all the per. And beyond this Win. ter mark the Sun progredleth never awbit further, but goeth into the other coalts of the World: wherefore this circle is also named Trevicus, as whoso say, returnable: the Ant. artick circle is equal in quantity & biffance with the Artick circle, and toucheth the Bos rizon in one point, & his course is altogether underneath the Carth, and the Stars that be placed in this are alwayes invitible unto us. The greatest of all the laid circles is the C. aninocial, and then the Tropicks, and the leas

teast (I meane in our habitation) are the Articks: and these circles must be unversions without breadth, and be reasoned of by according to the scituation of the Stars, and by the beholding of the Dioptra; and but supposed onely in our imagination, sor there is no circle seen in all the Peaven, but onely Galaxias. As sor all the rest, they be conceived by imagination.

29. The reason why that five parallel circles are onely in the Sphear.

Fige parallel circles alone are wont to be beforthed in the fphear; not because there be no more parallels then those in al & world For the Sun maketh every day one parallel circle, equally vistant to the Equinoctiall. (which map be well perceived) with b turns ing of the Woold : Infomuch that 1 28, has rallel circles are twice beforthen of the Sun. between the Aropicks, for lo many bapes are within the two returns, and all the Stars ared afte carried withall round about in the parallel circles: Howbest every one of them cannot be fet out in the Sphear, And though they be profitable in diverse things in Astros logy, pet it is imposible that the Stars map be pefcribed in the Sphear, without all F 2 the

g

the parallel circles, or that the magnitude on Dayes and nights may be precifely found out without the fame parallel. But in as much as they be not beemed to be to necessary for b at a introduction of Aftrology; they are left out of the Sphear, But o five parallel circles for certain (pecial infit nations are exhibited. The Arctick etrele levereth the Stars, which we ever fe;the Chival Eropick containeth the going back of the Sun, sit is the further. most part of the progress into the Porthand the Equinociali circle containeth & Cauino. stale: and the Brumati Tropick is the furthermost point of the wap of the Sun toward the Southe it is even the mark of the Willin. ter returnethe Antaraick circle vetermineth Datars whom we cannot fe. And fofeing that thep are berp ervedient for the introduatou into Astrology, they be right worthy to take room in the Sophear.

30. Of the five greater Circles, of the appearance and non-appearance of them.

A Lothe fair five parailel circles, the Araick circle appeareth altogether above the earth: and the Eliban Tropick circle is bivioed into two parts of Posizon, where-

of the areater part is above the earth and the leffer lightetb unverneath it. Bettber is this Crowick circle equally ofbioes of the Dolf. ton in every Town and Country, but according to the partety of the Reafons : it bath piveraties of up riling : and this Chiball circle is more unequally ofotoes in the Boatson to them that owell never the Boath then we bo; and further there is a place where the Catbal Wropick is wholly above the earth: and unto them that batto neerer unto the fouth then we the Efficas Topick is more unevenly parted in our Bosison. Parthermore, there is a coaft (but fouth from us) wherein the Tropick circle to squally ofvices of the Boxizon. But in our babitation the Officail Tropick is fo bibiped of the \$32130m, that the whole circle being bibined into eight parts, fibe parts that be as bobe the earth, and the under the earth. And indes it fameth that Aratus meant this Climate, when as be wrote bis bok of Phalomenon; whereas he weaking of his C. tivall Troutch Circle, faith on this wife : When this Circle divided is into eight parts even just,

Fiveparts above the earth, and three underneath remain needs must. 78 The Book of Rnowledge.

The reftleffe Sun in Summer hot from this

return back.

And so of this bivilion it followeth, the vap to be of fiften Equinociall hours, the night els. Equinocial hours long. And in the Hoatson of Rhodes, the Chival Tropick is to othis ded of the hozizon, that the inhole circle being divided into eighten parts, there that appear 29. Divilions about the Worizon, and nineten under yearth by which oibilion it appeareth that the longest pay in the Rhodes, bath but fourten Caninectial bours in it, & the night nine Equinodial bours with two half hours moze bestoe. The Controctal circle in every Dabitation is to justly of bioed in the miodell by the Boxizon, that the one half circle is abobe the earth, and the other half circle is unperneath the earth And this is the cause that o Equinocials bappen alwayes in this cir. cle. The Banmall tropick circle is fo bibibed of the Boatson, that the letter part that he above the earth, the greater part under the earth, and the anequality of bibilions bath e ben like of berfity in al Climats, as it is suppoled to be in the Elibal Aropick circle, and by this means the divisions of both the Aro picalicircles be precifely correspondent each to other:by reason whereof the longest day is

3?. Of the order of the five Paralel circles.

The order of the five parallel circles is not every where the same, but in our pabitation; the first had be called the Arcick, the second the Estivat Propick, the third the Equinocial, the sourth the Brumal, the 5. the Antarcick: but to them that dwel more north then we, sometime the first is accounted as the Estivat Propick, the second as the Arcick, the 3. as the Equinocial, the 4, as the Antarcick, the fift as the Brumal Propick: and because the Arcick circle is wiver then the Equinocial, the said order must nieds be observed.

34. Of the power of the five Parallels.

Lame five parallel circles alike. For the circle his our Extinal Acopick, is to them that owel in a contrary habitation, the Brumal Acopick. Contrariwise, that which unto them is the Exibal Acopick circle, is the Brumal Acopick unto us. But such as owel unver the Caninodial, even the this circles be in power Exibal Acopicke unto them; mean them that owell just unver the course of the Sun: so, in conferring one to another, that which is the Equinodial with us, wall be their Exibal Acopick

Aropicks chall be Brumals. So then the Exival Aropick circle may be fair by nature universally all the world over, which is next to the Pahitation: Aberefore unto them that dwell under the Equinodial, the Equinodial it felf serveth for the Estival Aropick, as wherein the Sun hath his course directly over their head, sall the parallel circles that take the rom of the Equinocials, being divided by equal divisions in the Porizon.

35, Of the space between the Parallels,

Deither the space of the cirles one from the other , do remain p fame throughout all Pabitations, but after p description of the Sphears they are discutt on this foat. Let any Perioan be oivided into firty parts, partick Wal be pibioed from the Wole arty fir parts, off : & the fame on the other five than be firty five parts diffant from the Estival, and the Equinocial hal be from either of the Poles firty 4. dibifions off. The Brumall Tropick circle Kanpeth from the Antartick firty five parts off. Peither have the circles the fame distance between them in every Town and Country:but the Tropicks in every declina: tion that have even like space from the Caulnodian; pet have not the Aropicks equal

rt

m

3

I

8

8

Likewise, the Articks have not in every declination one certain space from the Poles, but some where lesse, and some where more. All the Sphears be made for the Porison of Greece.

36. Of the Colours.

There are circles that cross overthwart the Poles, which of some men are called Colours, & they be so framed that they contain within their circuit the Poles of the world be called Colours, by reason of those portions of them that be not seen. And sor other circles, they be seen whole, the world moving round about, and there are certain parts of the colours invisible, even those parts that from the Antartick lye his under the Porison, & those circles be signed by the Cropicall points, and they divided into two equal parts of the Codiack.

37. Of the Zodiack.

The circle of the twelve Signs is oblique and is compounded of the paralell circles, of who two are fair to Wew the breadth of the Zodick, and one is called palling thoron

tho 20 w the miodelt Signs: thus toucheth he the time equal circles and parallels, putital Aropick in the first degree of Cancer, and publicated Aropick in parallels, of Capricorn. The breadth of product is twelve degrees. This circle called oblique, because he passeth over the parallels away.

38. Of the Horizon.

The Hogizon is a circle that ofbioeth the part of the Wasio fen from the part & cannot be fæn: fo be bibloeth p whole fubear of the woold into two parts, even that he leas beth the one ball libear above the earth, and the other balf (phear unperneath the earth; e there be two Bolisons: one fentible, the other imagines by unverftanding. The fentible bo. rison is that, which of our fight islimited at the attermot of our knowing: 500 bis Diameter is not palling a thousand furlongs even throughout. The Bortio : is imaginer by unperstanding, is for the speculation of p fobear of the fired Stars, and be bibloed the whole world into two parts wherefore there is not plame Horizon throughout every babitations Wown, but to a mans witting, he remaineth the fame for the fpice of four bun-Drew furlongs almost So & the length of the Dapes.

The Winde, is an exaltation hot and big, ingendied in the inner parts and hollowingle of the Carth; which when it hath due, and commeth foith, it modeth livelong about the Carth, t is called the Wind. And there be twelve of them which old Pains B 2

The Book of Knowledge riners have in use, of whom four be called Cardinals.

The first principall Winde.

Auster the Perfoional or South wind, bot and most agre, or likened to the agre, Sanguine, full of Lightning, and maketh, or causeth great raine, he nourisheth large cloudes and ingendreth petitience a much sicknesse, Auster Aphricus his first collaterall or side winde, aperie, he canseth sicknesse and raine: his second collateral is called Auro Auster, aperie, he provokett, clouds and sicknesse.

The second principall winde.

The fourth winne, and the fecond Cardinal is Septentreonarius, contrary, or positive to the sire, colo and dry, metancholick, compared to the earth: he putted away raine, he causeth colo and dryeth, a conserveth health, and hurteth the slowers a fruits of the earth: his collaterals, the sire is Aquilo, frosty and dry, earthy, without raine, and hurteth the slowers. Circius his second collateral, earthyer, cold and dry, causeth round, or hurles windes, thick snow and winds.

The third Cardinall winde.

From the rifing of the Equinociall that is in p Cast, bloweth Subsolanus, the third carotnail winde, stery hot, to zy, cholerick, tempe-

rate,

ite,

The Country of Cilicia, as the worthy Cosmographer Pomponius Mela reported in the innermost places there is a Problem of great renown. For the discommiture of the Persians by Alexander the slight of Darius, at that time having in it a samous City called Isso, whereof the Bay is named Bay of Isso, but now having not so much is a little Town. Far from thence yeth the foreland Amanoides, between the Rivers Pyramus Cydnus, Pyramus being in entermore.

The Book of Knowledge.

to Isos, returneth by Mailon and Cydnus runneth out begond through Tarlus. Aben is there a City pollelled in old time by the Rhodians, and Argiues, and afterward at the appointment of Pompey, called Soloc, by Porates now Pompeyopole.

Hard by, on a little hill is the Tomb of the Boet Aratus, most by to be froken of betaufe it is unknown why flones that are cast into ft vo leape about. Bot far from hence is the Lown of Cyrocus environed with a narrow

balk to the firm Land.

· Above it is a Cave named Corycus of fine gular nature, and far moze excellent their map with ease be discribed. For gaping with a wine mouth, shen immediately from the top it openeth, the Dountain butting up on the Sea, which is of great beight, asit were of ten Furlongs; then going beep bown, and the farther the larger; it is gren round about with budoing Tres, and caffeth it felf into a round Mault, on both lives fut fatelfi of Mos, so marbellous and beautifull, that tain 19 at the first it amageth the minos of them . The come into it, and it maketh them think the Typhobave never fren enough of it. There is by as the one going bown into it, narrow and rough low, ar of a mile and a balf long, by pleafant the darkn Dome

M

ti a

What the Husband-man

should practice, and what Rule he should follow, after the Teaching of Albert, Akind, Haly, Prolomy.

We wife and cunning Patters in Aftronomy have found that man map fee and mark the weather of the holy Chaiamals nights, how the whole yeer after thall be his working and boing, and they thall speak on this wife.

When on the Chainmas night & evening it is very fair & clear weather, and is with out wind and without rain, then it is a token that this per will be plenty of wine & fruit.

But if it be contrary wife, foul weather and windy, so that it be very feant of wine & fruit

But if the wind artic at the riding of the Sun, then it betokeneth great beath among

Beatts and Cattel this year.

But if the wind artife at the going bown of the lame, then it fignifieth beath to be a. mong Bings and other great Lozds: But if the wind artie north Aquilon at midnight, then betokeneth the per following a fruitful pear, and a plentiful. But if the wind do as rife and blow at South Austro in the mink of the day, that wind fignificth to us baily Sicknesse to reign and be among tus,

The Husband-mans Practice.

2. Of Christmas day.

Ichikmas day be on the Sunday, that year hull be a warm Winter, and beginning take with forrow, there thall come great winds and tempeks.

The Lent Gall be milo, warm and moit. The Summer, bot, by, and fair, the Parbell moit and colo, much unto Winter.

Thine and Corn hall be plenty and goo, and there hall be much honey, and the thee hall prosper well. The small sees and sruits of gardens hall flourish also. The old man hall by fore, and especially Momen that go with thise: peace and quietnesse that be

plenteous among married folks.

If Christmas day fall en Punday, there that be a misty winter, neither twoold not tw warm, the Lent thall be very gwo, the Summer windy, with great Kormy weather in many Lands: the harvest gwo and much wine, but very little honey; for the lwarms of Bes thall dye, and many women complaine, e sit mourning this year for their husbands.

Is Christmas vay be on the Austrap, it that be a colo winter and moist, with much know; the Lent that be good windy, the luminer wet, and harvest vry and evil: there that be reasonable plenty of Mine, Corn, Dite,

of the Christmas pay, it the Sun bo hine in whole pay, it betokens a peaceable year If the Sun hine the second pay, Gold hal be hard to come by, and the corn much set by. If the Sun hine the third pay, Bishops and Prelets will be diligent to make war, and great errours hal be among Church-men.

If the Sun do thin: on the fourth day, then must the weak chilozen suffer much pain.

And if the Sun vo thine on the fift day, then both the Winter Fruits and Pearls, and Fruits of Gardens profper well.

If the Sun vo Wine on the firth day, there wall be great plenty of the Fruits of the

Bardens with all other Fruits allo.

But if the Sun both wine on the seventh bay then betokenth hunger and scarceness, both of mans sood, and also Beaks, so his duals wal be dear, with Wine and Com.

If the Sun so wine on y eighth vay, it wall be good for Fiwers that yeer, and fortunate If the Sun do wine on the ninth day: it wat

be prosperous and happy sor thep that yeer.
If it whine the tenth day, then wall there

be much evil weather that per.

If it thine the eleventh day, there wall be much

104 The Book of Knowledge.

much mythy weather that per, and allo come

If it wineth the twelfth pay, then followeth

that per much war, bebate and Arife.

If the winde blow the Chulumas day at night, that betokeneth death to a great man in that Land.

The fecond night, if the winde be Ail and law; then the third night deeth the greatest boso in that Land.

If the winve blow the fourth night, there

than be dearth in the Land.

If it blow the fifth night there that be death among them that are learned.

The firth night, winde bringeth plenty of

Wine, Coan, and Dile. ale

The leventh night, wind bringeth neither burt nor and.

The eighth night, wind causeth much death

among old and poung people.

The ninth night, wind betokeneth much licknesse and beath among the people.

The tenth night, the Cattle fall to the

around and one.

If it blow the eleventh night, much Fill had ope.

If it blow the twelfth night, it betokeneth much war and orbate in the Land.

5 From the time of Christmas unto the twelfth-day.

The Hulband-man understanding all this, when on Chrismas even at midnight the wind wareth Aill, then it betokenth a fruitfull yeer: when on the twelfth day afore day, it is somewhat windy, that beto-

kenenth areat plenty of opl.

When the Sun in the twelfth day in the mouning both whine, that betokeneth foul weather. In the beginning it is never kedfast weather, for the moneths go all on through another the same day. If it be fair weather that day, it is happy and fortunate. The sirth day after the krk day is the last day; so that the first is last, and that in the sir dayes every day leabeth behind him two moneths.

Also that the second day leaveth February afore noon, and January at the after noon,

and fo forth noth all other bayes.

January.

If it be on Pew-yers day that y clouds in the morning be red, it hall be an angry yeer with much war and great tempets. If the Sun do hine on the 22 day of January there hall be much wind. If the Sun doth thine on Pauls day, the twenty five day of January, it hal be a fruitfull yeer, and it it do

rain or fnow, it that be between both: If it be bery mike it betokeneth areat death, If thon bear it thunder that day, it betokeneth great wines, and great death, and most especially among rich men that veer.

February.

On Shaobe-tueloay whosoever both plant or fow, it thall remain alwayes green.

Icem, boto much the Sun oto thine that day, to much be that thine every bay in Lent. And alipapes the next new Woon that failleth af. ter Canolemas day, and after that the nert tueldap, hall be alwates Shrobe-tueldap.

And when the Sun rifeth and thineth ear. lp, then prospereth well all manner of fruit: if pon bear it thunder, that it betokeneth

areat wine and much fruit.

Saint Beda faith there be three bays, and three nights, that if a chilo be be born therein the body absorth whole and shall not consame away until the day of Judgement: that is in the laft days of January, and the fecrets thereof are full wondzous. And ifa tree be bewed at, on the same day, it thall never fall. March.

The more mill's that there be in Marchithe more gon both it and as many bayes as be in March, to many hoar frotts that you have als

ter

se

Da

Or, Prognostication for ever.

107

ter Caster, and so many mists in August. At manner of trees that shall be cut down unto the two last holy days in March, shal never fal. Item, I on Palm-sunday be no fair weather, that betokeneth to gwoness. If it do thunder that day, then it signifieth a merry yer, and death of great men.

April.

If it rain never to little on the Alcention day, it betokeneth dearth of all manner of fod for Cattel. But when it is fair weather it is prosperus, and there shall be plenty of Tallow and much Mooil.

May.

Af the Sun do Chine on the 25 day of May, Whine Chal prosper wel; but if it doth rain, it doth much hurt. Item, if it rain on Whitsunday, it is not good. Item, in the last of May, the Dak trees begin to bear blossoms if they blossom then, you chall have a good year of Kallow and plenty of Fruit.

June.

If it rain neer solittle on Piosummer-day, that is the 24 day of June, then do not p Hales Puts prosper: If the holy Sacraments day of our Lord be fair, then it is good, and causeth fruit plenty, and the Lambs to ope.

H 2 July,

July.

If it rain the second day of July, such wear ther that he forty dayes after, day by day, yet some imputed it to Swithin the 15.

August.

If the San do Wine on the 15 day of August that is a good token, and specially for

Wine. September.

If thou wilt see and know how it chall go that yeer, then take beed to the Dak apples about S. Michaels day, so by them you chall know how that yeer chall be: If the apples of the Dak trees, when they be cut, be within sull of Spiders, then followeth a naughty yeer: if the apples have within them sies, that betokens a mætly good yeer. If they have maggots in them, then followeth a god yeer. If there be nothing in them, then followeth great dearth: if the apples be many and early ripe, so chall it be an early Minter, and very much snow chall be asoze Christmass, and after that it chal be cold.

If the inner part or kernell be tair, and clear, then wal the Summer be fair, and the coin good also; but if they be very most then wall of summer also be most. If they be lean then wall there be a hot and dry Summer. If thunder in this moneth it presageth plenty of wine and sorn that peer.

or, Prognostication for ever.

111
that is a token of neither too warm, no, pet
too colo.

8. How the winter should be the twelve moneths.

If any man belive to know what fair weather chalbe in every moneth or what rain, the must be mark in what hour the new Sponts in, and under what signe and what planet ruleth the same hour, so that plane moneth be hot and dry, cold a moist after the judgement and manner of the four times of the yeer.

Item, when the Mon is new changed, what weather halbe that moneth, halbe found out after this manner: If the Soon hine fair and clear, and so followeth wind: hineth the Moon pale so hall it rain. If it raineth in the next meneth after a new Moon, then hall it rain forth the whole moneth.

The faying of Sylinus, and Petrus.

If the Sun have in the morning under him troublesome clouds, then Gall ye have rain, and much tempest of weather; if the Clouds be troubled in the morning early, and black then Gall there blow a Grong Porth wind. If the Sun and Clement be red in the morning, it betokeneth raing weather. If it be red in the Evening, it is a token the nert day hal be fair weather.

1) 4 10 The

The Husband-mans Practice,

10. The Circles about the Sun, Moon, and other Stars.

Glido Bonatus speaketh on this wife, we shall mark the circles which be sometime about the Sun, and about the Spon, whether they be one or more, & if there be but one, they being clear and not long enduring, & quickly vanished, it betokeneth a fair and clear weather following; and a god and a clear ayre; and when there be many circles it betokeneth wind: if they be of colour red, & clear in many parts, then it betokeneth trouble in the ayre.

And if they be grey, dark, and of earthy colour, then it betokoneth trouble in the ayro, through cold and wind; And it bringeth in the winter time know, & in p kummer time rain.

When they be black, it betokeneth in the winter wind and know, and in fummer rain, and when they be many, then do the same the more increase.

11. The colours and lights of the other Stars.

Then the flars give great light, it betokeneth wind from the same parts where those lights be seen.

When the Cars be milly foark, as though they Chined through a mill, and that at the same time there be no Clouds in the element, it is a token of trouble in the Apre, and much raine rain Litte

thic etb

the from and the feminate that in a

is a

12.

hin tha

> tha his

raine or know, after the time of the year. And when they be clear and red, they judge it to be windp.

Likewise, if thou set the common Cars thicke, barke, and of courfelight, it betokes

eth alwayes change of weather.

If thou in clear weather left the Cars hot, and fall down to the earth, that is a token, that there hall be mortly after, wind from those parts where the Carres do Goot, and the moze they foot the ftronger hall be the wind. For when pon fe fuch things prefent it betokeneth inozoinate wind, & wben youfe fuch like in every part of the element, that is a token of great trouble in the Apre in all parts, with thunder and lightning.

12. How to know the weather by the rifing and going down or the Sun.

When the Sun arifeth clear and faire it

is a token of a fair dap.

When the Sun ariseth, and bath about him red Clouds.it is a token that it will rain that dap.

When there be Clouds in the Drient . fo that the Sun cannot thine through them at

his arising, it is then a token of raine.

When the kuglen is in the riling of the Soun

On that day that the Sun goeth into I bra, mark the weather the next day afoze

and the nert day after it.

And when p weather is given to lightnin more in March. April, May; then mark the also. For as the weather is in those days the come next after, and asore, when the Sun entreth into Aquarius, so that it be in the more part of the Summer. June, July, and August

In them many with men or conclude bot the weather halbe all the time that the Sur is from Libra, to Scorpio, even to the 20 to gree, that is, that from the 14 day of September, unto Alhallowes day, and commonly thall be likewife in the peer following. And this time is reckoned among y twelve morneths, to that four days are reckoned for moneth, severy day betokeneth a quarter of Mon which is seven dayes, and November is reckoned for the first moneth.

27. How to know the weather out of the new and full Moons.

Of the third day before the new and full Poon,

Or, Prognostication for ever.

119

Poon, mark well the Poon, when there goeth or procedeth from her a cleare light hining, it betokeneth fair weather, and also windy, and if the Poon be black or dark, it is a token of cold apre and raing.

Tahen there is a fair and clear circle by the Pon, and that being Marpe and bright it betokeneth a fair and clear agre, and if there be two or three rings about the Poon,

it betokeneth a cold winter agre.

When there is a darknesse about it, it is a token of winterly ays which cometh through strong winds. And it there be black about it, then it is a token of such like weather also.

When the Poon ariseth and hineth sair, it betokeneth sair weather: red, wind, black,

rain.

When the wind goeth from the Dccident; then it is commonly rainy weather.

From the Caft is fair weather.

From mid-night, it is cold and hard wear ther.

From noon, hartful and unhealthfull

weather.

If it do hail in the miost of Summer, it is a token of great cold in the higher Region of the apre.

Then the lower part is bot, that causeth

Paple to come from above.

18 Of the Eclipse of the Moon, the cause thereof how and when they happen.

Moon is nothing else but the interpolition of the earth between the booles of the Sun and Moon, they being Diametrically opposite; as if a line drawn from the center of the Sun, to the center of the Moon, thouls passe directly through the center of the earth which onely happeneth at the time of the Opposition, or full Moon, and not at every full Moon neither, but onely when they meet in the or, P rognostication for ever.

121

the head or tail of the Dragon; which is onely the interfection of two Circles, viz. the
Ecliptique, and the Different, which is the
Circle that carrieth the Moon about, and
you are likewise to note, that an Eclipse of
the Moon, appeareth to all those above whose
Porizon the Moon is at the time of the Opposition, though it be otherwise with the
Eclipse of the Sun, for a Solar Eclipse is to
some totall, to others partiall, and to others not at all visible, though the Sun, be at
the time of the Conjunction above all their
Porizons, &c.

.

1

1

To find when the Moon shall be eclipsed and when not, by her distance from either

of the two fections called the head and tail of the Dragon.

If the Hon at the time of her true oppolition to the sun that be distant from either of these two pointst less then 10 degrees, 21 minutes, and 20 seconds, then must the Hon instern an eclipse.

But if ber vistance (as befoze) be more then 13 degrees, 5 minutes, and 23 feconds, then the Don (at that full) cannot be eclipsed.

Therefore if her dictance be more then 10 degrés 21 minuts, 20 feconds, and less then 13 degrés 5 minutes, 23 feconds, then the

mag

map happen to be eclipted, but not necestarily.

20 To find when the Sun shall be eclipsed and when not.

If the apparant latitude of the Hon at the time of the visible conjunction be less then 30 minutes 40 seconds there must be an eclipse.

But if the apparant latitude of the Honbe more then 34 minutes 51 feconds, there

cannot be an eclipfe.

Therefore if the apparant latitude be more then 30 minutes, 40 feconds and less then 34 minutes, 51 feconds, there may be an eclipse.

21 How to behold an Eclipse of the Sun without hurt to the eyes.

Ake a burning glass, such as men use to light tobacco with in the Sun; or a spearacle glasse that is thick in the middle, such as sorthe elock sight; and hold this glasse in the Sun as if you would burn through it a past-board or white paper book, or such like; and draw the glasse from the board or book, twice so far as you do to burn with it; so by direct holding it nearer or surther as you shall see best, you may behold upon your board, paper or book, the round body of the Sun, and how the

4

hus thou mayest practice before the time in ecliple, wherein thou that discern any ond passing under the Sun; or by another utting or holding a bullet on his singers end etwirt the sun and the glasse at such time the sun wining) as thou holdest the glasse, s before thou art taught.

22. The minde of the Fathers, of the Nature of the Fire.

When the fire sparkleth it betokeneth rain. When the Fire giveth much flame, or else then a man taketh an Hacken, and listeth tup by the coals, and if the coals do hang bereon, that betokeneth wind and rain.

And when a man know finder cealeth, And when a man know findeth. If there be dark clouds thereby, Then look for rain verily. If the Frog in the morning do cry, Betokeneth rain great plenty.

23 A

23 A briefe discourse of the naturall call we of watery Meteors, as fnow, hail, rain, &c.

fol bi Bou mult first unverstand, that all water meteors, as rain, Inow, or fuch like, is but moift papour drawne op by the vertue of the Sun, and the reft of the Planets into the Ha middle region of the aire, where being counto 3 cealed or officioes, falleth upon earth, as hall e bil or rain.

24 Of the Raine-bow.

Pliny faith the Rain-bow is made by the and Sun beames Ariking topon a hollow clom When their edge is repelled and beaten bat against the Sun, and thus arifeth bariety Sno colours, by the mixture of cloudes, aire, and it no fiery light together. But (as he faith) fail f ft pretendeth neither fair nor fowle weather comm

25 Of Rain.

Of these kind of meteors you may rea Arist, libro primo Meteorologicorum, cap 1. 86 2. But batefly, Rain is a cold papont

heat f

bere

to th

abe C nches be lor

TIME eat d

andapeu

Or Prognostication for ever. 125 pearthly humour, raised from the earth maters into the missle region of the air. here by the extremity of cold it is thickned to the body of a cloud, and after being folved, falleth upon the earth.

26 Of Hail.

ter

mé th

th Hail is ingenozed of Rain, congealed con to Ice, fræzing the drops presently after e siffolding of the cloud, whereby we have peat irregular Stones fat on the Carth; 3 ave fæn them in that fathion 1610 contain 4 iches about: for the bigher it commeth, and be longer it tarieth in the air, the rounder it and the letter.

27 Of Snow.

Snow is of the same bumour that Hail is, and not grown together to hard. Pliny faith, fail soner meltsthen Snow, and the Hail ommeth oftner in the day then in the night.

28 Of Frost and Dew

When in the pap time through the faint eat of the Sun there is a colo and moist Apour drawn up a little from the earth, pre**fently**

126 The Husband-mans Practice,

fently at night it descendeth againe upon the earth, and is called Dew, and in it spring or Harvest, it is a sign of fair we ther; but it by means of cold it be congealed it is called Frost, and therefore Dewes com not so often in hot seasons, neither who winds be by, but after a calme and cleanight, frosts dry by wet and moissure: For when (as Pliny saith) the Ice is melted, the like quantity of water in proportion is no found.

29 Of Wind.

Winde is nothing but many exhalation brain from the earth and inforced laterally above the sun.

30 Of Sodaine Blasts.

A windy erhalation being theowne down and encompassed (as Pliny saith) in ath course of cloudes newly over-cast comminat some time with such a violence, as bursts and cleaves a dep cloud in sunder, and makes a storm, of the Greeks cased Ecophias, but when this cless is not great, but that the windes be soccod to turne round, at

roll in this descent without lighting, there is made a whirle-puffe. or gust, cased Typhon, which is to say, the some Ecnephias, fent forth a winding violence, and this wind both beare many things away with it, changing from place to place; but if the hole in the cloud were great, it is called Turbo, casting bown and overthrowing all that is next it. Pliny saith, no Ecnephias commeth with snow, nor as Typhon from the South: some say, vinegar thrown into this wind, breakes the gust.

31 Of Earth-quakes.

Plenty of windes gotten into the bowels, holes and corners of the earth buriting out of the earth, and the earth clotting again, causeth the waking, or earth quake, and is a token of ensuing warre.

32 Signes of Earth-quakes.

Then waters in well or pits be troubled, and have a bad favour, the long absence of the windes, Arange noises, the obscurity or darkness of the Sun with clouds, and Arangely coloured, &c.

3 4

33 Of

33 Of Thunder and Lightning.

with mosture, is carried up into the middle region, and there in the body of a cloud: Pow these two contraries being thus that or pent in one rom together, they fall at variance, whereby the water and the agree not untill they have broken the prison wherein they were pent, so that fire and water size out of the cloud, the breaking whereof maketh a noise like the renting of cloth, which we call thunder, and the fire lightning, the thunder being made first, but the lightning first seen, in respect the sight is before the hearing; and of lightnings there be many sorts.

That which is dry burneth not at all, distincting and dispersing: that which is most burneth not likewise, but blass, and altereth the colour: but that which is cleare is of a strange operation, it draweth vessels dry without hart to the vessel; it melteth mettall in bagges or purses, and harteth not, the bag or purse, nor War that sealed the bag hart; it breaketh the bones, and harteth not the slesh; and killeth the child in the womb, not harting the mother. Pliny faith

Or, Progonstication for ever. 129
satth, Scythia by reason of colo, and Egypt
by reason of heat, have seloome lightning.

34 What things be not hurt with lightning.

It burteth not the Lawrel træ, it entreth not past 5 foot into the earth, such that are shadowed with the skinnes of Scales, 02 Scacalves, are fræd, the Eagle is fræ, 4c. Pany other wondrous and strange kind of Peteors bæthere in the heavens often times sæne, as Comets, burning Pragons, 4c. but this bolume will not conteine an ample discourse thereof.

Rules, of Excellent use, and right necesfary to be known of the Husbandman, and not onely of him but of all other persons of what quality soever.

A fed first I will begin to when what Rules of Husbandry are to be observed in each moneth, and also Observations for taking of Physick, and keeping of a good and wholsome Diet and modest Recreation.

36 Rules of Husbandry in January.

This is the leason for good husbands to lop and purge superfluous branches from fruit trees, uncover their roots, set all kinds of quick-sets and fruit trees in the new of the Spoon, be sure the wind be not North nor East, and jet the same sides to the South and

Observations for Physick and diet in Fanuary.

The best Physick is warm clothes, good fires, warme dyet, and a merry honest wife.

Rules of Husbandry in February.

This moneth set, cut, and lap Anicksets and Roses as all other plants, set and plant Tines, Hops: and all frust that growes on buthes: Sow Pease, Beanes and Dasons, surnith your Bardens, with sallads and potbearbs for Summer, peune and trim all sorts of frust trees, from Hoss, Canker, and superstuous branches, remove grafts or young trees in the last quarter, the moon being in Aries, Libra or Scorpio.

Observations for Physick and diet in February.

If necessity urge, you may let blood, but

The Husband-mans Practice, but be sparing in Physick and be sure when a warme day comes, to prevent taking of cold through carelesnesse, for the warm ayre in this moneth is not lasting, but oft deludes us to our prejudice.

Rules of Husbandry in March.

Row regarding the wind and weather, graft, cut quicklets, cover the roots of fruit trees (opened in December and January) with fat earth, fowe Dats, Barley, Parfinips, Onions, Carrets, Pelons, Cowcumbers, and all kind of Potherbs, fifp Partichokes and Sage, and sowe all manner of Garden seeds.

Observations for Physick and diet in March.

Now advise with the honest and able Astrological Physician, 'tis good to purge and let blood.

Rules of Husbandry in April.

This moneth som Hemp and Flar: pole Hops, set and some all kinds of Garden herbs, Restore the liberty of the laborious Bcc, Bee, by opening her Hive; Bark trees for Tanners, and let good-hulwives mind their Gardens, and begin to think of their Dairies.

In gardning never this rule forget. To some dry, and set wet.

Observations of Physick and diet in April.

The use of Physick becomes now seafonable, as also purging and blood-letting, tis good to abstein from wine, for many diseases will be taken thereby to the ruine of many.

Rules of Husbandry in May.

This moneth commands the probident house-wise, and the product Artiff, to set their distils on work, in the beginning of the moneth sowe and set those tender dummer herbs, that would not indure the some cold, weed your Hopgardens, cut off superfluous branches, moss trees, and gardens, and weed corne.

Obser-

Observations for Physick and diet in May.

Now every Garden and hedge affords thee food and phylick, Rife early, walk the fields by running streams the North and West sides, Sage and sweet Butter an excellent breakfast, clarified Whay with Sage, Scurvy Graffe Ale, and Wormewood beer are wholfome Drinks.

Rules of Husbandry in June.

At the full of the moon this moneth and nert, gather your berbs to keep our for the whole year, fet Rolemary and Billiflows ers, fow Lettice and Raoft thak of font dages, after the full, and they will not run to fed : thear your thep the mon increaling.

Observations for Physick and diet in fune.

Let honest moderate labour and exeroile procure your sweat, thin and light diet, and chast thoughts tend to health: Lie not unadviscally on the ground, or over haftily grink.

Rules

n

Rules of Husbandry in July.

Get Rue, Wormwood, and Gall, to frome on your floores to bestroy fleas, at therfull Moon gather flowers and fiers, by pour flowers rather in the Wade then in the Sun which to much exhaleth their bertue. but to aboto corzuption let the Suns heat a little bilit them.

Observations for Physick and diet in July.

Beware of violent heat and sudden cold. which are the great distempers of this moneth, and produce pestilential diseases. forbear superfluous drinking, but cat heartily.

Rules of Husbandry in August.

Pow with thankfulnelle reap your defired barbeft. Sow winter perbs in the new of the moon. Eftem fair weather as precious and mil peno it not. Bather Barnen fens neer the full, use moderate viet, forbear to nep presently after meat: take beer of forain colo after beat.

Obser-

Observations in Physick and diet in August.

Beware of Phylick and blood-letting in the Dog-dayes, if the aire be hot, otherwise, if occasion require, you may safely make use thereof.

Rules of Husbandry in September.

The beginning of this moneth and end of the former, gather tops, their Complexion being brown and the weather faire, and no dew on the ground, kill Bres, make Merinice, remove and fet all flips of flowers between the two Lady days, remove trees from Sept. till Febru. especially in the new of the Poon, the weather warm, And the wind South or West, cut Naick sets, gather ripe fruit, sowe Theat and Rie, winter Parsnips and Carrots, And set Roses, Strawberses and Barberses.

Observations for Physick and diet in September.

v fo

Now as the year declines provide your winter

Or, Prognostication for ever. 137 winter garments, hang them on loosely to pervent that you might after repent of, good for Physick, and Phlebotomy.

Rules of Husbandry in September.

Sow Wheat and Rie, remove young plants and trees about the new moon, observing this as a seasonable secret, that in setting you carefully place that side to the South and West, which were so before you took up the Plant, otherwise the told kils it: gather your remaining Winterfrust, set all kinds of Buts and Accens, and cut Rose trees but once in two years, if you intend to have store of Roses.

Observations for Physick and diet in October.

The garments you last moneth hung on your backs in jest, now button them close in good earnest; cloath you now for prevention, for the cold comes insensibly, and fogs oft times beget a whole winters cold. Consult with your Tailors as well as Physicians.

Rules of Husbandry in November.

Det Crabtrée Kocks to graft on, in the old of the moon, let peale and beanes, and lowe parlaips and carrots. Arench gardens with dung, uncover the roots of your apple trées, and so let them remaine till March, kill swine in 02 nier the full of the moon, and the flesh will the bester prove in boyling.

Observations for Physick and diet in November.

The best physick this moneth, is good exercise, warmth, and wholsome meat and drinke.

Rules of Husbandry in December. .

In the last quarter of the moon this moneth and the next, are the best times to fell Aimber: Let Fowlers mind their Game, Cover all your best sowers and herbs from cold and flooms with rotten horsening, look well to thy cattel, blood borses. Let a warme fire and a cup of Peaar be thy Bath, the Litchin thy Apothecaries Cop, hot meats and

or, Prognostication for ever. 139
and broths thy physick, and a well spread table the proof of thy charity to the poof neighbours, to whom this addice is seasonable.

Being poor thy felf, and can't not feast at all, Thank God for such as thee to feasting call.

Observations for Physick and diet in December.

The best Physick is as before, a merry honest heart, and the exrecise of charity among thy poor Neighbours.

37 Here follow other briefe Rules of Physick and Hulbandry.

Phyfical Observations.

Good to let the Sanguine blod, when the Poon is in Pisces.

Tolet the Cholerick blod when the Pon bath her course in Cancer, or Pisces.

Woon is in Libra, Agrarius, or Pisces.

取 2

140 The Husband-mans Practice.

To let the Flegmatick blood, when the moon is in Sagittarius or Aquarius.

To prepare humours the Soon being in

Bemini, Libza, oz Aquarius.

Good to purge.

With Pils the Poon in Pisces. With Potions, the Poon in Airgo.

Good to take Comits, the Poon being in Taurus, Airgo, or the latter part of Sagitatrius.

To purge the head by Ineefing, the Poon being in Cancer, Leo, 02 Mirgo.

To take Blifters, the Moon being in Aries,

Tancer, 02 Mirgo.

To frop Flares and Rheumes, the Poon being in Laurus, Airgo, 02 Capicorn.

To bathe, when the Poon is in Cancer.

Libra, Aquarius, or Pifces.

Wo cut the hair offthe Perd of Beard, when the Poon is in Libra, Sagittarius, Aquarius, or Pisces.

Briefe Observations of Husbandry.

Set, Sow Sieds, Graft and plant, the Pon being in Caurus. Airgo, oz in Capzico2n.

And all kind of Coin in Cancer.

Graft in Parch at the Poons increase, We being in Taurus or Capricorn,

Shear Shep at the Poons increale.

Fell hard Timber from the Full to the Change.

Fell Frith, Copice, and Fuel at the

first quarter.

Liboz gelo Cattel, the Moon in Aries,

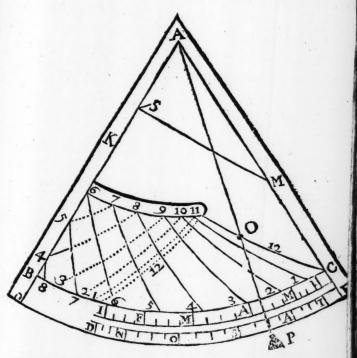

Dagittarius, or in Capricoan.

Kill fat Swine for Bacon, (the better to kéep their fat in boiling) about the Full Boon.

The use of a small portable Instrument, to finde the Houre of the Day upon the least appearance Of the Sunne.

Dis Infrument map be made etther of Wood, Braffe, oz Silver, 02, for a difft, this Waper it felf being pafted upon a fine piece of Board, that will not warp map supply the want of a better ; In the Center of this In-Arument (which is noted with the Letter A) there is fixed a piece of fine filk, habing a Imall Diummet of Lean at the enothereof, noted with the Letter P, and upon this Aring, let there be a Wead, or small Pinsbead which may be flipped up and down the Aring, as occasion thall require, this Small Bend of Ding-bead is noted with the Letter O; Like wife upon the eoge of the Inftrus ment noted with A Brou must have a fingl piece of wier (oz a piece of a fmall pin) about a quarter of an inch in length, which mut

Or Prognostication for ever. 143 Aick up right upon the edge of the InArument, this small piece of wier is noted with the letter S (02 if you will, you may have a

fmall hole made in the line AB into which you may flick a pin when you mould know the houre of the day, which will be sufficient. Lakly, between the Lines B Cano D D are noted

noted certain small vivilions, which are the dapes of the twelve moneths of the year noted with the fire Letter of every moneth, as I for Ianuary, F for February, M for March, A for April, M for May, I for June, I for July, A for August, S for September, O for October, N for November, and D for December, pow the Boure-lines offer themfelbes to every ones eye, having the num: bers, 12,1,2,3,4,5,6,7,8 11, 10, 9,8,7,6,5,4,

fet at each end of them.

Babing thus described the scherall parts of the Intrument, I will now thew the use thereof which is very easte. For first (the thato being fired fast in the Center at A) pour must lay the string upon the day of the moneth (as in the figure the Aring lieth upon the 10 day of April) then Kaping it there, move the bead up or bown the firing till it lie just upon the line of 12, as pou fæ in the figure at O, then is your Infrument fitted to finde the boare any time that dap, which you must bo after this manner. Take the Inftrument in pour band, laping the thumb of your right hand about E, and the thumb of pour left hand about R, turning the left fide of pour boop to the Sun, and bolo up the Intrament till the Sun caft the ma-

The use of the Table of Interest.

The first column conteineth any number of pounds from one to 1000, against any of which sums, there is set down the Interest thereof so one, two, there, or sour

moneths according to the titles.

Example, Let it be required to find the interest of 70 pound for 4 moneths. Find 70 l. in the first column, and right against it, in the column of four moneths, (which is the last) you wall find 11.8 sh. od. and so much is the interest of 70 pound in four moneths.

Pow, if you would know what the interest of the same sum would be in 6 moneths. Ewk in the Nable so the interest thereof, tu 2 moneths, which is 0 l. 14 sh. 0 d. which added to the interest so; sour moneths, namely, to 1 l. 8 sh. 0 d. the sum is 2 l. 2 sh.

Or, Prognostication for ever. 149

1, 2 fb. od. and so much is the interest of 70

l. in 6 moneths.

Allo, if it be required to find the interest of any sum which is not in the first column,

as of 75 li.

m:

nst

the

ur

hs ind ich ich ind

in:

of, d. Let it be required to find the interest of 75 li. for three moneths. First, look the insterest of 70 li. for three moneths as before, you wall find it to be 1 l. 1 sh. od. Like wife find the interest of 5 l. for three moneths, which is 0 l. 1 sh. 6 d. this being added to the former, viz. to 1 l. 1 sh. o d. maketh 1 li. 2 sh. 6 d. which is the interest of 75 l. for three moneths.

The

8222:223:8828

The use of the foure preceding Tables.

These sour tables are all to be used plame way, their difference being onely in the Rate of the profit; which it is fit should be more in houses then in lands; because houses are subject to be boyd of Tenants and many other casualties of fire and ruine which lands are not. And therefore I have (as briefly as I can) binted in the Tables, which Table is fittest for any kind of purchase: not that any one is bound to make his bargain just according to these Rates; but hereby any one may judge of his Purchase, and know what profit he makes of his money.

The Cables of themselves are so plain, that they need no explaining; I having there in altogether applyed my self to the usual way of reckoning these bargains to be worth so many years purchase. Onely the year sor the more examelle is divided into twelve

months, and not into four quarters.

net

This Example will make all plain.

It is delired to know what the Leafe of an Bonfe for one and twenty peers is morth in ready money . To finde out this, look in the last Table which is calculated after the rate of 10 per Cent. and is fittell for Ench kind of bargains; and in this Wable at 21 pers you thall finde the value of the Leafe to be mosth 8 peers and 8 months purchase. So that let the yearly rent of value of the bonse be what it will, the saio Lease of 22 pers is worth eight whole pers rent, and almost three quarters of the fato periprent: which you may easily reckon up, and to know the true value of the purchale. And at this plice pon hall have 10 peer cent. profit for pour money,

Jhave made these Aables to thew the worth of long leases also, because most men balue a long lease too much, in respect of the value they set upon a thort lease. Reckoning a lease of 21 years to be worth but 7 years, and yet thinking a lease of 60 years to be worth 12 02 13 years purchase, Whereas you may see by this table, that though the lease of 21 years be worth 8 years and 8 moneths purchase; yet the lease of 60 years

The Book of Knowledge.

is not worth full 10 pers purchase: may the lease of an hundred pers, or the Fectimple cannot be worth above 10 peers purchase, allowing the said rate of 10 per cent for the money.

Many other questions of Purchases and Reversions might be added; as you may see at large in my Purchasers Pattern, printed so, Mr. Pierrepont at the Sun in Pauls

Church-pard.

A brief discourse of the Celestiall part of

the World of the distances, magnitudes, motions, and fituations of the Planets and fixed STARS.

1. Of the Heaven of the fixed Stars.

At though (by the Diarral motion of the Primum mobile) this Peaven (as all the other ords of the Planets are) be violently turned about once in 24 hours, yet they retein a proper motion to themselves which is contrary to the sommer, this motion is called natural, because it is effected by the proper motion of the Starre or Planet in its own Drue, and the other motion is called Mistent, because it sozceth a motion contrary to what the thing it self in nature would perform.

This Peaven of the fixed Stars is very Row

flow in motion, moving but one begree in 71 years, and to is 25412 years moving through the whole Zoofack: It is aborned and beautified with others glozious booles of feberall magnitudes, of which the Ancients have noted 6 in number, and that the multiplicity of these glozious bodies might not confound the beholders by their friendlar fitnation , the Ancients babe contraced their number by the uniting a certain num: ber of them together into the form or fashion of fome libing Creature or other obled, as the SWAN, the BEAR, the SHIP, the CROSSE, &c, and thefe are called Constellations, of these Constellations, the Ancients observed only 48, though there be others found out of later times, of which 21 were on the Porth live of the Caninodial. 15 on the South live and 12 in the Zodiack it felf: each of thefe Confellations contein a certain number of thele Stars . whole magnitudes are very baff, in respect of this little ball whereon we live, foz.

A Star of the art Pagnitude is greater than the Globe of the whole Carth 68 times, of which magnitude there are 15 Stars.

A Ktar of the second Pagnitude is greater

for then then Globe of the Whole Cearth 28 times, of which magnitude there are 45 Stars.

A Star of the third magnitude is greater then the globe of the whole Carth 11 times, of which magnitude there are 208 Stars.

A Star of the fourth magnitude is greater then the globe of the whole Carth in times of which magnitude there are 244 Stars.

A Star of the fifth Pagnitude, is greaterthen the globe of the whole Carth. 21 times of which magnitude there are 217 Stars.

But a Star of the firth Magnitude is lefte then the Carth, and of this Pagnitude are 49 Stars.

An Appendix to the precedent Almanack.

2 Of the Heaven of Saturn.

This Peaven is scituated within the Concavity of the heaven of the fixed Stars, and conteineth only the body of his one Planet, which appeareth as a Star of the second magnitude; he is of a swarthy and obscure colour like unto lead; his distance from the earth in his mean distance is

1 3

9091960

9091960 miles, and the circumference of of his spheare is 57030166 miles, according to which by the violent motion of the primum mobile he is moved 2376261 miles in an hour, but his owne proper motion is flower than any of the other Planets, yet much swifter than that of the fixed Sptars, for he enouth his course in 30 years.

be

f

of

3 Of the Heaven of Jupiter.

WIthin the Concavity of the Spheare of Saturn is scituated the heaven of Iupiter, in which moveth the body of Uwhich appeareth like a Star of the Ark magnitude very bright and of nature warm. In his mean distance he is distant from the Carth 3431400 Piles, his body exceeding the earth in magnitude 14 times, the perfemter of his spheare being 21568800 miles, so that his housely motion is 898700 Piles, he sinisheth his Zodiacal period in 11 years, and 316 days.

4 Of the Heaven of Mars.

V Poer the Beaven of Jupiter, is the Dib of Mars, appearing of a red fiery colour being of his Spheare being 9432971 Piles, so that by the violent motion of the primum mobile, he is moved 393040 Piles in the space of an hour, he compleateth his revolution in one yeare and 322 days.

fgn

n

t

þ

of

1

e

g

3,

5 Of the Heaven of the Sun.

The Sun is feated in the midst of the Planetary D.b. by which he enlightens the superiour as well as the inseriour. In his mean distance he is distant from the earth 98,9000 Piles, the magnitude of his body being (according to Tycho) 140 times greater then the earth, the compasse of his D2b being 6216571 Piles, and he moveth in a houre 259023 Piles, he maketh his Zodaical revolution in 365 dayes, 5 hours 49 min, 16 Second.

6 Of the Heaven of Venus.

VENUS the most bright and splendent Star in all the Firmament, is moved about the Sun as about a Centre, her distance from

from the earth being 98,000, Piles the moveth equally about the Sun, though her instinction from to be very fregular, the follower times higher and sometimes lower then the Sun, the is fir times less than the Earth, and is distant from the Sun 735300 Piles.

be

08

fr

th

7 Of the Heaven of Mercury,

Venus is placed Mercury, He is lettuate very neere the Sun, and is never above 29 deg. distant from the Sun; so that he is rarely seen, he moveth about the Sun as Venus doth, and is distant from the Earth 989000 Piles, he is less then the earth 19 times

8 Of the Heaven of the Moon.

The Poor is the lowest of all the Planets, being distant from the earth in her mean distance 48760 Piles, the Circumserence of her Spheare being 306491 miles, she runeth in the space of an hour 12770 miles, shee is less than the Carth 39 times, but according to Copernicus 43. times and finisheth

The Book of Knowledge.

finitheth ber courte in 27 dayes, 7 houres, 43

min, and 6 feconts.

Having thus taken a brief view of the heavenly Debs, we cannot but admire their vall magnitudes and swift motions, and if from hence we can learn nothing, yet let us learn this that there is a God, and that he is far above all the works of his hands, and the wife-man contemplating thereupon, saith, We may understand by the beabens how much mighter he is that made them, so by the greatnesse and glory of the Creatures proportionally the Paker of them is seen.

by, to be buried in Christian buriall at the discretion of my Crecutrix hereaster nominated.

Item, I give unto my Son P. T. the

fam of Fibe bundzed pound.

7-

lf

n

8

Item, I give unto my Danghter F.—. the fum of Five hundred pounds.

Icem, I gibe unto my Daughter E. th

fum of fibe bundeed pounds.

Item, all the rest of mp Houses Leases Lanss. Tenements, and Goods what soeber I give unto S. mp Wise for terms of her life, and then to my Hon P, and his Petres sor ever, upon Condition that the shall pay all mp Debts and legacies, and make her sole Executric of this mp last Will and Testament, repoking all other Wills and Testaments.

In witnesse whereof I have hereunto set my hand and seal the day of the yeer first above written. 178 The Book of Knowledge.

Pleasant Questions, in Arithmetick.

Quest. 1. To tell the number that another

man shall think, be it nver so great.

Let the party that thinketh double the number which he thought web. done, bid him multiply the fum of them both by 5 and give you the product (which they will never refuse to doe, it being so far above the number thought) from the which if you abate the last figure of the product (which will alwayes be a Cypher or 5) the number thought will remain.

Example.

r

W

ſ

Let the number thought be 53 which doubled make 106 and multiplyed by 5 make 530 then if you take away the cypher which is in the last place and there will remain 53 the number thought.

Queft. 2. A pretty Que ftion.

A Thiefe breaking unto an Orchard, stole from thence a certain number of peares, and at his comming forth he met with 3 men one after another, who threatned to accuse him of thest, and for to appease them, he gave unto the first man halfe the peares that he stole, who returned him back 12 of them. Then he gave unto the second halfe of them he had remaining who

who returned him back 7. And unto the third man he gave halfe the refidue, who returned him back 4 and in the end he had still remaining 20 peares. Now doe I demand how many peares he stole in all. To answer this Question you must work backward, for if you take 4 from 20 there will remain 16, which being doubled make 32, from which abate 7 and there will remain 25, which being doubled make 56, from which Substract 12 and there will remain 38. which again doubled make 76 the true number of peares that he gathered.

Quest. 3. Another of three Sifters.

A Certain man having three daughters to the eldest he gave 22 apples, to the second he gave 16 apples, and to the third he gave 10 apples, and sent them to the market to sell them, and gave them command to sell one as many for a peny as the other (namely 7a peny) and every one to bring him home so much money as the other, and neither, change either apples or moneyes one with another, how could that be done.

This to some may seeme inpossible, but to the Arithmetitian very easie, for whereas the eldest had 3 peniworths and one apple over, the second 2 peniworths & 2 apples.

over, and the youngest had ten peniworths and 3 apples over, so that the youngest had so many single apples and one peniworth as the eldest had peniworths and one apple over, and consequently the second propor-

tionall to them both.

They made their markets thus, A steward coming to buy fruit for his lady bought all the apples they had at 7 a peny, leaving the odde ones behinde, then had the eldest sister 3d. and one apple, the middle sister 2d. and 2 apples, and the youngest 1d. and 3 apples. The steward bringing the fruit to his Lady, she liked it so well, that there were but a few remaining, she notwithstanding sent him for them, and bid him bring them at any rate.

The steward coming to the market again, could not buy the odde apples under a peny piece (who to content his Lady, was fain to give it) then had the youngest sifter 3 peniworth, the middle sister 2 peniworth, and the eldest one peniworth, and so had they all 4d. apiece, and yet sold as as many for a peny one as another, and neither changed apples nor money one with another, a sthey were commanded.

Athemite (this is to be learned) that the Potes of Poles ten on that right five, either of man or woman, ever more venoteth honefty and riches, but on the left five, to be harmed with calamities and continually poor.

If a man hall have a Pole on the forehead both vindicate, that he hall possesse much

wealth and riches.

The woman having a Pole on the forehead both bemontrate, that the thall either govern, or else come to an bigh bignity.

Is a man that have a Pole about the overbrow, both argue that he thall couple, and forne in mariage, both with an honest, weal-

the and bertuous woman.

The woman having a Bele in the same place both benote that the shal topn in marriage both with a rich, sair and contely person.

If the man chall have a Pole on the overbrow, then let such a person refraine from marriage altogether, or all his life time; for that such as person (if he marry) chall have five wives in his life time.

The woman having a Pole in the like place to have so many husbands (as the man hath wives) in her life time; as Melampus

wittetb.

If a man have a Pole on the note fomeluhat.

rusop, and another the like in the plibit place, both bindicate that fuch a person to be over-much given to the venerial ac.

The like Pole fien either on the note, or eye, of the woman and that the bath the like on the article place, both fignifie the same that

is before fpoken of the man.

I a man hall have a Mole oberthwart the note, both venote, that he hall wanner hither, and thither, through Countryes, and Cities.

A Pole the like francing on the momans note, both portend that the that travell on fot through fundry Countryss; and that the bath the like Pole besides on the privy place.

If a man have a Pole on the gullet of theore become

very rich.

If the woman have a Pole on the nether jaw, both vinolcate that the than lead her life, in forrow and paine of the body: because the hath that within her body which than himber her from the atteining and bearing of children.

If a man Chall have the forme of a Pole on his tongue, both demonstrate that he Chall marry with a rich and beautifull woman.

31

At either man or woman wall have a spole on any of the Hys, both portent that he or well to be a great feeber, and a glatton.

Is a man that have a Pole on the ching with argue that he that be rich both in the lub-

Rance of money, and pollellions.

The Description of the Wheele of Fortune.

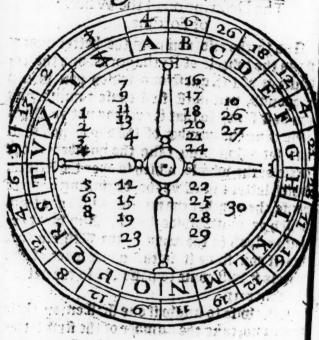

Anato the end you map the better under fand the wheele of Pythagoras, and the recolution of the questions which you monit propound, pou must first chuse a number as pou best fancy, so that it erceeds not 30. This done take the number of the pap as you that! and fet point, and take the number of the circle of the while which is over the letters. which letters must be the beginning of pour name, then gather the numbers thto one fum, which be must vivide by 30. And what remains look in the body of the Wabrele for. and Afpon finde it in the upper part of the wheele ft will come to patte, if in the nether be contrarp.

Like wife to know if one that enjoy their love or no, take the number of the first letter of pour name, the number of the Blanet, and of the day of the week, all these put toger ther and ofbine them by 30. And if it be ahave it will come to your minde, and if below, to the contrary; and minde that nume

ber in the which exceeds not 30,

Pytha-

Fithagoras Wheele

Sentle Reader, this is to let thre understand that this is the true and ancient Book of Knowledge though now enlarged to be sixteen sheets, the counterfeit is but ten sheets, and that you may know it the beter, look in the Till page and you shall finde the date thereof, 1657

The Chances or Demands which may be made or propounded in the VVheel of Fortune.

Whether you shall obtein the favour of the person you desire.

2 Whother your Master shall attein to the

preferment he defireth.

3 If you shall have the favour of a Prince as you desire.

4 If the Prince shall take the town besie-

ged.

5 Which of the two Princes which make warre the one against the other, shall have the victory.

6 Whether there shall be any great feat of

armes done in the camp or not.

7 If there shall be peace between two

8 If a Captain shall be in great favour with

the Lord he serveth.

9 If a Captain be valiant or not.

10 If a Horfe shall win the race.

II If a prisoner shall come out of prison.

12 If a fick person shall amend.

13 If the fickness shall be long or short.

your profit.

104

25 IE

15 If you shall have your hearts desire or not.

16 If you shall have a childe by your wife or Lemmon.

16 If a woman with child shall have a fon or daughter.

18 If a child shall be fortunate or unfortu-

nate in the world.

19 If a thing stollen will be recovered a-

20 If it shall be a plentifull yeer.

21 If it be good to take a voyage in hand.

22 If it be good to occupy merchandise.

23 If it he good to take a wife.

24 If a friends Ship shall take good effect.

25 If a man shall be fortunate in his house.

26 If a person shall be alwayes rich or poor.

And thus you may do of all other demands

whereof pon would be refolbed.

And to the end you map the better unders france this wheele of Pythagoras, and the restolution of the demands which pe would proportion, you must first of all choose you a number what you list at your discretion, as 10, 15, 02 12, 02 any other number more or less; this being done, take the number of the day,

vife

on

or

as you hall bereafter finge : all fet in oaber, and then take the number tobich pe thall find in the wheele upon the first letter of pour name : As for example, if pour name be Ans thony, you must take A, and the number which is over it : all which things pon Hall Ande put in order in the wheele, and gather all those numbers into one sum; which pe hall divide by 30, referbing the reft: As for example, if your totall number bo amount unto 134, office that by 30, and there will 14 remain, which number pe wuft fearch in the wheele, and if you have it in the upper balf, your matter hall speed well, and if it be in the nether half, it thall be evill: and thus may you know all that you befire to know.

And if ye would know whether ye wall enjoy your love or not, take y number of the first letter of your name, the number of the Planet, and of the day of the week; all these numbers ye shall put together, and then of bide them by 30. as you no before, and take your remainder, and læk in the wheele, and you shall find it; and then if it be in the upper half, you shall have your request, and if it he in the nether part, it is contrary: And thus may you do of all other things which you would know: you must consider that the numbers in the wheele passe not 30, as re

Mall

wall finde them beginning with 1,2,3 and 4. consequently to 30 as in the VVheele you may see.

An Alphabet to know which of the two that fight, or go to Law one against another; shall have the Victory.

A B I K	C	D	E	F	GH
3	22	24	22	3	7 6
i K	L	M	N	0	7 6 P Q
30 I	10	23	13	8	13 7
R S	T	V	X	8 Y	13 7 Z
R S	8	2	6	6	4

For to understand and practice this Alphabet rightly, you must first know y proper
names of the Parties which is to fight or go
to law one against the other, then with the
same names in Latin in the nominative case
singular, observing the true Orthographie,
and according to the Alphabet, joyne unto
each Letter of the same names the number
unto him apperteining, following the pourtraiture here before written, and summe the
sato numbers together; that is to say, each
man by himself, and when ye have put them
all together, of vive them by 9, and that which
remaineth

remaineth on the one part and on the other, the division being made, you wall not it is you knot. After this, behold the Rules which follow, whereby you may know what wall happen to the one to the other: And if it fortune that in the dividing the whole bp6, there remain nothing, you must take the least number of 9. for that must then serve in this purpose, as you wall bereafter know more at

large by erperience.

It both not change once in a thousand times, that two Persons which do go to fight or do go to law one against the other, should be of one very name, therefore look to know their true names. And to the end that you may the better understand this Rule: put the case that Peter and Paul should fight one against the other: If you do then examine that which is said before, you shall know the thing that shall bappen; yet must you know that God is Governour and disposer of all things, and can change and alter them at his pleasure; but we speak according to the instinance and course of the Stars; and here P. 13

Reader, be pleased to take notice, That this Book of Knowledge, having been several times Printed with much approbation; It is now Re-printed with very much Additions, but nothing of the old omitted: It is now so

CO123-

vertilement of Books.

eat no further Addition or altera-

be expected.

sthere is another Book lately Printed, ituled, The pleasant History of Thomas of Reading; or, The fix worthy Yeomen of the VVest, corrested and inlarged.

Gentle Reader, I desire thee to take notice that there is a piece of Poetry lately sorth, called Dimagorus, written by Mr. Quarles, which I need not stand to commend, in respect that the Author is sufficiently well known to the World.

There is also another excellent Book lately extant, called, The Art of Courtship, which before mas never Printed; it bath passed the perusal of many ingenuous Gentlemen, who are pleased to afford it that commendations, which indeed it justly deserves.

There is a Picture of King CHARLES the Second on Horseback, with Armour, Drums, Trophies, &c. the likest Picture yet extant.

All to be fold by John Stafford, at his Shop at the fign of the George, at Fleet-Bridge, LONDON.
